# Evaluation of Iranian Automotive Industries 

M. Hassanpour *<br>Department of Environmental Science, UCS, Osmania University, Telangana State.

#### Abstract

The automotive industry comprises all sectors of the design, development, and production as well as marketing and selling of vehicles. Iran's automotive industries possess the largest sector after the oil and petroleum sectors in Iran. The preliminary assessments taken by both of Iranian industries organization and environment protection agency were reported to the presence of around 71 various kinds of Iranian Automotive Industries (IAI) and provided the data from initial screening once prior to set up industries and process by present research. Current cluster study is targeted to weight and rank all the IAI empirically via Simple Additive Weighting (SAW) and COmplex PRoportional ASsessment (COPRAS) methods supported with weighing systems of Friedman test and Entropy Shannon, SPSS IBM 20, and Excel 2013 software to process raw data. The SAW method is resulted to classify IAI from the largest industry to the smallest one depends on 5 criteria, such as the number of staff, energy consumed (water, fuel, and power), and the land area used. COPRAS model is assigned to rank IAI pertaining to both negative and positive criteria. Finally, awareness of input materials stream introduced into IAI cycle paves the way towards the development of studies related to industrial ecology and industry 4.0.

## 1. Introduction

The car manufacturing history gets back to the beginning of 1962 in Iran. Iran's automotive industries are the largest sector after the oil and petroleum sectors in Iran. Iran placed the 20th largest automaker in the world and the Middle East, with 1395421 vehicles and 35,901 commercial vehicles in 2009. In 2009, Iran was ranked fifth in the world's fastest growing car industry after China, Taiwan, Romania, and India. Iranian car manufacturing is available in a variety of different vehicles, including passenger cars, van, trucks, buses, minivans, and pickups. In Iran, about 500,000 staff (approximately $2.3 \%$ of the total workforce) directly work in the

[^0]automotive industry and many more in the industries related to this industry. Approximately $75 \%$ of the total vehicle manufacturing in the country is related to passenger cars and around $15 \%$ belongs to small trucks [1]. There is no certain classification for automotive industries globally. But some classifications collected and embedded this class with machinery, tools, equipment, and metal products industries. Current study includes around 71 active Iranian automotive industries and their belongings, such as a cluster study besetting flasher of automatives, automotive rubber parts, brake pads, car camshaft, car shatton, car coil, car gas condenser, car glass pump, car odometer, car oil filter, car oil sprayer, car sealant, car seat, car tire disc, combined tap of gas fueled vehicles, crankshaft, disc-shape brake pads, dynam fan, full car fly wheel, grease pump of car, insulated foil car sunshade, lock of car, rubbing clutch, safety glass (car bend), seat belt, snow sweeper engine, steering wheel, car water nozzle, water pump, car wire, automatic starter, automatic of signal light, automotive starter, complete exhaust, oil pump, car antenna, mirrors of car, car heater, lightweight cars heater, car wiper, car brake booster, car horn, car pedal, propeller motor (fan radiator), hydraulic brake pump, car pump (auto gas station), crankshaft covering, car bolts and nuts, trans burner torch and fuel sprayer, hand brake, car thermostat, car strap, car light, car hazard light warning, delco capacitor, car dashboard, car fuel grade and gasoline tank, car oil barometer, gear knob of gearbox, signal rod, delco, brass gear of car gearbox, car brake disc, car clutch disc, bike and motorcycles rims, car wheel rims, car wheel chains (non-metallic), car bumper, bike and motorcycle speedometer, sibak, and car alarm system [2].

In Iran, all the industrial projects come through some assessment levels prior to layout on an industrial scale. So, present research collects the raw data of the first screening of IAI assessment that is done by both Iranian industries organization and environment protection agency to process in next levels of evaluation especially decision-making processes. Decision-making processes encompass a variety of methods to assess. Actually, decision-making models are introduced as a channel to either approve or disapprove industrial and engineering projects once before installation. But they are different belongs to kind of projects and their purpose. The current study includes both methods of COPRAS and SAW to conduct this research. In this study, SAW model is used because of the simplicity and high accuracy of the method. In recent years, the COPRAS method has been used as a multi-factor decision-making method for these reasons; the simplicity of the calculation method, total ranking of options, simultaneous utilization of quantitative and qualitative criteria, ability to calculate the positive (maximum) negative criteria (minimum) separately in the evaluation process, estimation of importance degree for each option to indicate the size of the better or worse one option as well as adaptation to local and empirical conditions and realities. This method is used for planning, accounting, financial, geography purposes and so on. COPRAS model has been widely employed by Zavadskas et al. [3] in a variety of studies. This practice is a suitable procedure for value assessment comprising data of maximizing and minimizing variables. Application of COPRAS procedure and its ability to sort out and rank data has appeared in a wide range of researches completed by Zavadskas et al. [3], Vilutiene and Zavadskas [4], Zavadskas et al. [5], Kaklauskas et al. [6], Kaklauskas et al. [7], and Zavadskas
and Turskis [8]. COPRAS method needs to assign one weighting system to estimate the first weights of factors such as Entropy Shannon, Friedman test, etc.

In the weighing system by Shannon Entropy, the main idea of this method is based on the basis that the dispersion in the values of an index is more than that, the index is more important. Shannon Entropy method gives the highest weight to the index with the highest degree of deviation. This method also is a multi-index decision-making methodology that is used to calculate the weight of the criteria and widely used as auxiliary approaches. It consists of forming a matrix in which the rows of research choices and its columns form the research criteria. In the following steps, it gives the weight of the criteria. Mostly, the weights that come from the Shannon Entropy method are in many of the cases appeared to be unrealistic. SAW method is one of the simplest elements of the multi-criteria decision-making process. In this method, after scaling the decision matrix, using the criterion weight subtleties, the weighted scalar decision matrix is obtained, and according to this matrix, the score of each option is computed. According to the above-named cases, this method also widely used in lots of studies by the same authors, etc. Thus, the present study targets to weight and rank all the IAI as a cluster study using the SAW and COPRAS methods supported with weighing systems of Friedman test and Entropy Shannon.

## 2. Literature Review

El Mkhalet et al. [9] selected Entropy method to identify the best supplier in the Moroccan industrial automotive sector pertaining to machine availability, number of occupational damages, efficiency of generation lines, health, and safety. So, the weighing and ranking systems resulted to prioritize the items in the following steps. Danaei [10] classified 13 projects of Kish airport containing 7 criteria using the weighing system of Shannon Entropy. The weighing system distinguished values for each criterion individually and TOPSIS model assigned to rank projects from 1 to 13. Ozturk [11] utilized Shannon Entropy weighing system to unearth the urban sprawl based on 4 criteria such as built-up area $\left(\mathrm{km}^{2}\right)$, built-up density (\%), built-up area growth rate (\%), change in built-up area ( $\mathrm{km}^{2}$ ) supporting with geographic information system during 24 years since 1989-2013 in the Atakum, Ilkadim and Canik districts of Samsun, and Turkey. Thus, the developed weighing system proved an extensive expansion and alteration for the case study area. Hashemzadeh et al. [12] tried to offer a practice to sort and weight around 16 factors and criteria in the implementation of an individual dies exchange in 14 plastic industries running with the injection method. To run the process, the Shannon Entropy had been used as a weighing system.

Zolfani and Zavadskas [13] employed the COPRAS model to assess about 5 samples of buildings constructed in Iranian villages in order to figure out the sustainability of small society's buildings frameworks. By the way, 13 criteria and 5 options were selected to carry out the research. After weighing the criteria, the ranking system appeared as Iranian traditional systems was used in deserts > light gauge steel frames > insulating concrete frameworks > Tronco systems > 3D

Sandwich panels for main options. Popovic et al. [14] used the COPRAS model to select the best investment projects pertaining to cost estimation. The results came out of ranked and weighted factors and criteria for 4 projects. Medineckiene et al. [15] applied the COPRAS method to evaluate building life-cycle assessment in sustainability and its implication, comprising 2 kinds of living buildings possessing heating network. They tried to expand their study with including a variety of factors and criteria, such as emission of construction operation, outlays, energy consumed and materials streams, etc. Findings came into view as identifying the proper alternative via ranking and weighing parameters. Vujicic et al. [16] employed the COPRAS model to select the best option as an indicator to purchase the fluorescent lamp. Aforementioned research used key factors to rank and weight. So, the COPRAS method paved the way to select the best and worst indicators. Jamali et al. [17] used the COPRAS model to evaluate the 5 automotive manufacturers based on some criteria such as flexibility, productivity, inventory, operating expenses, and responsibility and reshaping in Iran. Finally, 5 automotive industries were ranged from 1 to 5 based on obtained weights. Pamucar et al. [18] offered a new method in the incorporation of both DEMATEL and COPRAS to weight and rank the various criteria and select a temporary military road. By this experience, COPRAS technique was applied for ranking alternatives based on distinguished values. In the study by Zarbakhshnia et al. [19], COPRAS procedure was exploited to prioritize and choose third-party reverse logistics providers in the presence of risk factors in a certain automotive industry in Iran.

The classification of Iranian food industries and Iranian leather and textile industries were done using SAW model completed by a weighing system of Friedman test considering 5 main criteria of the number of employees, energy consumed (water, fuel, and power), and the land space applied to set up industries [20, 21].

## 3. Methodology

The required steps from project identification to project implementation in studies associated to Environmental Impact Assessment (EIA) encompass the initial screening of project, consider the public involvements and decision-making process, approve the project and finally implementation of the project, and post EIA. Therefore, the present study attempts to move the aforementioned steps from initial screening to the decision-making process (using SAW and COPRAS). Figure 1 displays the diagram of the followed work.

Figure 1. Diagram of the followed work.

### 3.1. Shannon Entropy

The first step in the process of Entropy is the formation of a decision table. Therefore, the raw data obtained from the assessments of both Iranian industries organization and Iranian environmental protection agency have formed the decision matrix. The normalization of data was done using the arithmetic method based on Eq. (1). The Eqs. (3) and (4) were used to estimate the Entropy value. The distance between each of the indicators was calculated from the Entropy value using Eq. (4). It was used the Eq. (5) to calculate the weight of each indicator by Excel 2013.

$$
\begin{gather*}
\mathrm{Pij}=\frac{\mathrm{Xij}}{\sum_{i=1}^{m} X i j} \quad j=1, \ldots, n .  \tag{1}\\
\mathrm{Ej}=-\mathrm{k} \sum_{i=1}^{m} P i j \times \operatorname{Ln} P i j \quad i=1,2, \ldots, m .  \tag{2}\\
\mathrm{k}=\frac{1}{\operatorname{Ln} m} .  \tag{3}\\
\mathrm{dj}=1-\mathrm{Ej} .  \tag{4}\\
\mathrm{Wj}=\frac{\mathrm{dj}}{\sum d j} . \tag{5}
\end{gather*}
$$

### 3.2. Friedman Test and SAW Method

This test was done by SPSS software (IBM SPSS Statistic 20), in which Eqs. (6-10) were used to calculate the values. The data introduced into software were composed of a matrix containing some columns and rows to process. Normalization of the decision matrix was done according to Eq. (11). In the following SAW, the method was assigned to collect weights using the special vector obtained from the Friedman test.

$$
\begin{gather*}
\hat{\mathrm{r} . \mathrm{j}}=\frac{1}{\mathrm{n}} \sum_{i=1}^{n} r i j  \tag{6}\\
\hat{\mathrm{r}}=\frac{1}{\mathrm{nk}} \sum_{i=1}^{n} \sum_{j=1}^{n} r i j .  \tag{7}\\
\mathrm{SSt}=\mathrm{n} \sum_{j=1}^{n}\left(\hat{r} . j-\hat{h^{2}} .\right.  \tag{8}\\
\mathrm{SSe}=\frac{1}{\mathrm{n}(\mathrm{k}-1)} \sum_{i=1}^{n} \sum_{j=1}^{k}\left(r i j-\hat{I}^{2} .\right.  \tag{9}\\
\mathrm{Q}=\frac{\mathrm{SSt}}{\mathrm{SSe}}  \tag{10}\\
\mathrm{Pij}=\frac{\mathrm{Xij}}{\sum_{i=1}^{n} X i j} \quad i=\Gamma, m ; j=\Gamma, n . \tag{11}
\end{gather*}
$$

### 3.3. COPRAS

COPRAS method was introduced by technical researches, this method was used for multi-criteria evaluation, maximization, and minimization of the criterion values. In fact, this feature was a superior advantage over the method of the SAW. The steps involved in evaluating this approach are as below. Normalization of the decision matrix was accomplished using Eq. (12).

$$
\begin{equation*}
\mathrm{Pij}=\frac{\mathrm{Xij} . \mathrm{W}}{\sum_{i=1}^{n} X i j} \quad i=\Gamma, m ; j=\Gamma, n . \tag{12}
\end{equation*}
$$

The Xij and $W$ are the values and weighted values, respectively. The calculation associated with the sum of the normalized values for positive and negative criteria were done via Eqs. (13) and (14). In order to determine the relative importance of the options, Eq. (15) was applied. The greatest value of relative importance (Qmax) of the options was calculated by Eq. (16). By the way, $\mathrm{S}-\mathrm{min}$ and Nj are identical with the minimum value of $S-i$ and ranking amount, respectively. In the below equations, $S+j$, min $S-I$, and $S-i$ are the maximizing criterion of jth alternative, the minimum value of the summation of minimizing criteria of the jth alternative, and summation of the minimizing criteria of the jth alternative [6-8].

$$
\begin{array}{ll}
\mathrm{S}+\mathrm{j}=\sum_{i=1}^{m}+P i j & i=\Gamma, m ; j=\Gamma, n \\
\mathrm{~S}-\mathrm{j}=\sum_{i=1}^{m}-P i j & i=\Gamma, m ; j=\Gamma, n \tag{14}
\end{array}
$$

$$
\begin{gather*}
\mathrm{Qj}=\mathrm{Sj}+,+\frac{\mathrm{S}-\min \times \sum_{I=1}^{n} S j-}{\mathrm{Sj}-, \sum_{i=1}^{n}\left(\frac{S-\min }{S j-}\right)}=\mathrm{Sj}+,+\frac{\sum_{I=1}^{n} S j-}{\mathrm{Sj}-, \sum_{i=1}^{n}\left(\frac{1}{S j-}\right)} .  \tag{15}\\
\mathrm{Nj}=\frac{\mathrm{Qj}}{Q \max } * 100 . \tag{16}
\end{gather*}
$$

## 4. Results and Discussion

The term "technology" in the industry refers to a set of physical objects or technological artifacts, human activities in order to design, construct and implement, and the work done by facilities which are related to production processes. Figure 2 portrays all generation processes and technologies exploited in IAI, extracted from diagrams depicted by evaluator team of Iranian industries organization in the Persian language.
(6)

Up to down: Flasher of automatives (1), Automotive rubber parts (2), Brake pads (3), Car camshaft (4), Car shatton (5), Car coil (6), Car gas condenser (7), Car glass pump (8), Car Odometer (9), Car oil filter (10), Car oil sprayer (11), Car sealant (12), Car seat (13), Car tire disc (14), Combined tap of gas fueled vehicles (15), Crankshaft (16), Disc-shape brake pads (17), Dynam fan (18), Full car fly wheel (19), Grease pump of car (20), Insulated foil car sunshade (21), Lock of car (22), Rubbing clutch (23), Safety glass (car bend) (24), Seat belt (25), Snow sweeper engine (26), Steering wheel (27), Car water nozzle (28), Water pump (29), Car wire (30), Automatic starter (31), Automatic of signal light (32), Automotive starter (33), Complete exhaust (34), Oil pump (35), Car antenna (36), Mirrors of car (37), Car heater (38), Lightweight cars heater (39), Car wiper (40), Car brake booster (41), Car horn (42), Car pedal (43), Propeller motor (fan radiator) (44), Hydraulic brake pump (45), Car Pump (Auto Gas Station) (46), Crankshaft covering (47), Car bolts and nuts (48), Trans burner torch and fuel sprayer (49), Hand brake (50), Car thermostat (51), Car strap (52), Car light (53), Car hazard light warning (54), Delco capacitor (55), Car dashboard (56), Car fuel grade and gasoline tank (57), Car oil barometer (58), Gear knob of gearbox (59), Signal rod (60), Delco (61), Brass gear of car gearbox (62), Car brake disc (63), Car clutch disc (64), Bike and motorcycles rims (65), Car wheel rims (66), Car wheel chains (nonmetallic) (67), Car bumper (68), Bike and motorcycle speedometer (69), Sibak (70), Car alarm system (71).

Figure 2. IAI and their generation processes.
The Friedman test analysis revealed the mean rank ratios about $2.94,4,1.78,1.27$, and 5 for the existing values of employees, power, water, fuel, and land, respectively in Table 1.

Table 1. IAI, their energy consumptions, staff and, land properties based on nominal capacity.

| Industr y | Nominal capacity (No) | Employe es | Power (kw) | $\begin{gathered} \text { Water } \\ \left(\mathrm{m}^{3}\right) \end{gathered}$ | Fuel (Gj) | $\begin{gathered} \text { Land } \\ \left(\mathrm{m}^{2}\right) \end{gathered}$ |

The obtained results in Table 2 led to developing a classification for IAI as below: $52>2>48>13>5>7>70>67>17>56>24>27>65>66>53>12>38>3>68>30>16>36>19>$ $34>21>4>37>50>41>29>39>43>15>61>35>47>63>26>10>62>54>42>64>57>23>$ $8>31>51>46>33>25>58>49>40>11>1>69>6>60>59>45>28>32>14>55>44>22>71$ $>9>18>20$.

The weights values were calculated via Entropy Shannon procedure in the Excel sheet and it was found the amounts according to Table 3.

Table 3. Weighted values based on Entropy Shannon procedure.

In industry 4.0, expansion of industries was encouraged in parallel with an expansion in employee's recruitment. In other words, automation in industries is not sufficient with sustainability definitions enacted in Industry 4.0 [22]. So, the more decline in the number of staff, the more decline in outlays will be taken. But automation in industries needs large land area used and rise in outlays, while energy consumptions can be replaced by renewable resources, etc. As a result, both criteria of the number of employees and the land area used were assumed as negative criteria. As we know in this situation, the COPRAS model is posed as a dominant practice to prioritize the positive and negative criteria supported by the weighing system of Entropy Shannon. Eqs. (11) and (12) were used to estimate the normalized and weighted decision matrix. So, results have appeared in Table 4. The ranking system was completed using Eqs. (15) and (16) according to Table 5.

Table 4. The normalized and weighted decision matrix.

### 4.1. Statistical Analysis

T-test analysis was run to figure out a significant difference among existing factors of employee, power, water, fuel, and land, so it was manifested a ( p -value $\leq .000$ ). The study by Hassanpour [23, 24] presented a significant difference among parameters such as feed, initial feed, employees, power, water, fuel, and land area used ( $p$-value $\leq 0.009$ ) for 21 Iranian plastic industries and about ( p -value $\leq .000$ ) among factors of employee, power, water, and land except fuel for around 57 Iranian food manufacturing and processing industries. The categories of water and fuel have occurred with equal probabilities via one sample chi-square test around 0.000 so the decision was made to reject the null hypothesis. The distribution of employee, power, and land were obtained to be normal with mean values and standard deviation about 38.69 and 22.30, 172.76 and $135.03,3897.18$, and 2463.27 , respectively. The one-sample Kolmogorov-Smirnov test was observed to be around $0.009,0.030$, and 0.051 for employee, power, and land, respectively. Therefore, the null hypothesis was rejected for employee and power values but it was retained for land values. The distribution of employee, power, and land were found the same, so the null hypothesis was rejected according to related samples Friedman's two-way analysis of variance by ranks around 0.000 . Pearson correlation sig. (2-tailed) proved that the highest correlation was between data of land and water around 0.82 .

### 4.2. Input Materials Stream

Industrial ecology emerged for the first time in 1989 as a new discipline in the world of science. It focuses on the environment, technology and economy, and the interplay between these three categories. Industrial ecology involves studying the flow of materials and energy in social and
economic systems and taking into account the optimization of their use. Therefore, in industrial ecology, efforts are being made to discover and operate a structured and organized way of interacting with the industrial and environmental world. Experts in industrial ecology believe that by improving the state of production from linear mode to a closed cycle system, both the environment and the economy aims can be achieved. The reduction of industrial waste in the source of production is also a change in the production process, which involves process optimization, proper product storage, change in product composition, input materials and change in technology, or separation of waste streams. The best and easiest way to reduce pollutants (creating an industrial ecology system) in each unit is to change process variables, change in feed inputs, use of newer processes and new technologies, and change in equipment [25]. Therefore, the present study tried to pose the way for introducing input materials of automotive industries by Table 6 in the appendix.

## 5. Conclusions

Considering this fact that the current study is the findings of the evaluation team of Iran's prestigious organizations before the construction of the industries, we mentioned the most important conclusions such as compliance with the international standards for the classification of industries in the country and abroad, establishing synergies with other relevant organizations regarding the provision of industry-specific information needs, providing statistical requirements for reporting, applying precisely the policies adopted by relevant organizations on various industry groups and helping to design tariffs, determining energy consumption in different industries in the country and provinces and comparing it with the use of the same industries at the international levels, creating a database for public use and exploiting it to determine executive strategies to guide industry stakeholders to optimize consumption rates, respond to the needs of the case, creating the necessary data for the input and output stages in terms of energy consumption of industries in the country and provinces, and step by step, determining the optimal consumption pattern of energy and material flow in industries.

## Appendices

## Table 6. Input materials entered into IAI.

Industry Initial materials

Poly amid 6,6 (212 kg); Polycarbonate ( 256 kg ); ABS ( 264 kg ); Metal sheets with thickness of 0.6 and 1.2 mm , st37 ( 572 and 194 kg ); Bone fiber $0.8 \mathrm{~mm}(667 \mathrm{~kg})$; $\mathrm{Cu}(133 \mathrm{~kg})$, phosphor and brass ( 67 kg ) sheets of 0.2 mm (total 334 kg ); Brass wire of $2 \mathrm{~mm}(137 \mathrm{~kg})$; Head lamp automatic of 12 volt ( 100000 No ); Lamps of 12 volt and 3 watts (100000 No); Fuse 30 A ( 100000 No); Fuse framework (PP 100000 No); Ballbearings with d= 4.7 mm (100000 No); Coil with thickness of 0.2 and $3.5 \mathrm{~mm} \mathrm{C-75}$ (100000 and 100000 No ); Concrete bonding T shape, 4 mm (800000 No).
NBR-SBR-NR-CR, Poly butadiene butile ( 230820 kg ); Accelator ( 2780 kg ); Stearic acid $95 \%$ ( 5960 kg ); ZnO (9t); Anti oxidant BLE 25 ( 248 kg ); Anti anzanan DPPD ( 3470 kg ); Kumarone Resin ( 4620 kg ); Soot and filler (119.3t); DOP oil (23t); Sulfur (4570 kg); Mgo (1550 kg); Talk powder (2t); cardboard (15t); plastic bags of PE (8t).
Metal powder (27500 kg); Rubber powder ( 15000 kg ); Dolomite ( 37500 kg ); Barite ( 32500 kg ); CaCO $\mathrm{Ca}_{3}(60000$

Cast iron rebar 36 MN5-11/1167 DIN (635t); Brass bushing gig pins ( 400000 No); Wood box with dimensions of $58 * 45 * 83 \mathrm{~cm}^{3}(1000 \mathrm{No})$; Cardboard with dimensions of $11 * 8.5 * 20 \mathrm{~cm}^{3}$ ( 100000 No ).
Dynamo sheets with and without lacquer of $0.4 \mathrm{~mm}(17100$ and 90 kg$)$; Al sheets of $1 \mathrm{~mm}(10667 \mathrm{~kg})$; Cu wires of 0.1 and $0.6 \mathrm{~mm}(10000$ and 12000 kg ); Waxy paper containing width and thickness of 0.5 and $65 \mathrm{~mm}(200 \mathrm{~kg})$; Paper with width and thickness of 0.2 and $65 \mathrm{~mm}(300 \mathrm{~kg})$; cardboard with $\mathrm{d}=16$ and $32 \mathrm{~mm}(13334 \mathrm{~mm})$;
Insulation base $50 \mathrm{~g}(100000$ No); Washer NBR ( 100000 No); Cap ( 100000 No); Screw 4 mesh ( 100000 No);
Transformator oil (8000 1); Cover of products ( 5000 No ); Carton with dimensions of $38.5^{*} 30.5^{*} 15.5 \mathrm{~cm}^{3}$ ( 5000
No).
Al-Si pipe with $\mathrm{d}=12.5 \mathrm{~mm}(424 \mathrm{~kg})$; Al pipe with $\mathrm{d}=9.5 \mathrm{~mm}(145 \mathrm{~kg}) ; 4$ strings extruded AL pipe ( 122000 kg ); AL sheets with thickness of $0.1 \mathrm{~mm}(30 \mathrm{t})$; AL sheet, $0.1 \mathrm{~mm}(6150 \mathrm{~kg})$; Metal sheets of steel-37, thickness of 1.5 $\mathrm{mm}(9400 \mathrm{~kg})$; Potassium salt of fluorine aluminum (1920 kg); $\mathrm{N}_{2}$ gas ( 460.6 t ); Metal bead SW20 (140000 No); pipe cap ( 140000 No); Plastic base ( 140000 No); Horny shape AL pipe ( 140000 No); Oily dye ( 1850 kg ); Carton with dimensions of $400 * 800 * 100 \mathrm{~mm}^{3}(70000 \mathrm{No})$.
Rebar with d=14 mm and metal of $9520(1865 \mathrm{~kg})$; Rebar with $\mathrm{d}=17 \mathrm{~mm}$ and metal of 45520 ( 8725075 kg ); Rebar with $\mathrm{d}=50 \mathrm{~mm}$ and metal of $4552(178052 \mathrm{~kg})$; Rebar with $\mathrm{d}=8 \mathrm{~mm}$ and metal $9520(12559030 \mathrm{~kg})$; Rebar with $\mathrm{d}=5 \mathrm{~mm}$ and metal of $9520(725 \mathrm{~kg})$; Rebar with thickness of 1 and $2 \mathrm{~mm} \mathrm{St-12-05} \mathrm{(3770} \mathrm{and} 2070 \mathrm{~kg}$ ); Metal sheet with thickness of 2 mm (31.1t); Metal sheets of St-52 (16t); Metal sheets of St-44-3 with thickness of 2 mm ( 1900 Kg ); Plastic spool ( 100000 No ); Coil containing 4.625 rings, wire with $\mathrm{d}=1.6 \mathrm{~mm}$, external $\mathrm{d}=36 \mathrm{~mm}$ ( 100000 No); Light PE $25 * 35 \mathrm{~cm}^{2}$ ( 100000 No); Cardboard with thickness of $1 \mathrm{~mm}(100000 \mathrm{No}$ ); Metal belt St-37-2 (18t).
Poly amid 6,6 (2646 kg); Brass wire with d=3mm(367 kg); ABS granule ( 1087 kg ); Cu wire with d=3 mm (370 $\mathrm{kg})$; Brass rebar with $\mathrm{d}=6 \mathrm{~mm}(500 \mathrm{~kg})$; Brass sheets with thickness of 0.5 and $0.7 \mathrm{~mm}(34$ and 150 kg$)$; $\mathrm{C}_{75}$ sheets with thickness of $0.3 \mathrm{~mm}(15 \mathrm{~kg})$; St-37 wire with internal $\mathrm{d}=1.5 \mathrm{~mm}(200000 \mathrm{No})$; V shape coil with length of 20 mm and $\mathrm{d}=0.2 \mathrm{~mm}$ ( 400000 No ); Circular spring DS with $\mathrm{d}=0.25 \mathrm{~mm}(100000)$; Plastic bags of $8 * 8 \mathrm{~cm}^{2}(100000$ No); Cardboard box with dimensions of $4 * 7 * 8 \mathrm{~cm}^{3}\left(100000 \mathrm{No}\right.$ ); Carton with dimensions of $65 * 65 * 25 \mathrm{~cm}^{3}(232$ No).
Rubber with $\mathrm{d}=9 \mathrm{~cm}$ and thickness of 3 mm ( 300000 No ); Rubber ring ( 300000 No ); Dye furnace ( 15000 No ); Gum ( 3000 No); Sheets with thickness of 0.5 and $1 \mathrm{~mm}(90$ and 45 No ); Galvanized sheets with thickness of 2.5 mm ( 30 No); Soft fiber ( 15 No); Nail punch ( 600000 No); Punch (300000 No); Packaging box (300000 No); Carton (13000 No); HClO (2400 No).

Metal sheets of St-2-03 with thickness of 1 mm (7.8t); Metal sheets of St-37-02 with thickness of 0.2 mm ( 370 kg );
Metal sheets of St-37 with thickness of $1.5 \mathrm{~mm}(4.6 \mathrm{t})$; Metal sheets of St-37 with thickness of $1 \mathrm{~mm}(900 \mathrm{~kg})$;
Rubber sheets with thickness of $1.5 \mathrm{~mm}\left(34 \mathrm{~m}^{2}\right)$; Ingot SW-17 ( 6 t ); Phenol resin ( 100 kg ); Nail punch, AL with d= $1 \mathrm{~mm}(100000 \mathrm{No})$; Brass and iron screws ( 200000 No ); Iron or brass terminals ( 200000 No ); Rubber caps (200000 No); Tensile and compression springs ( 300000 No); Various bolts and nuts ( 900000 No); Fibers ( 100000 No); AL base ( 100000 No ); Box with dimensions of $8.5 * 5 * 5 \mathrm{~cm}^{3}$ ( 100000 No ); Carton with dimensions of $43 * 21 * 26 \mathrm{~cm}^{3}(100000 \mathrm{No})$.
Natural rubber ( 244500 No); Sulfur ( 8200 Kg ); Soot ( 131400 kg ); Accelerator ( 4100 Kg ); Aromatic oils DAP ( 116400 kg ); Astearic acid ( 12300 kg ); $\mathrm{ZnO}(2460 \mathrm{~kg}$ ); Anti oxidant ( 2870 kg ); Anti ozonat ( 2870 No); Retardant ( 500 Kg ); Coil (8t); Naylon, cardboard and carton for packaging (276700, 276700 and 16470 No); Labels (23000 No ).
Poly ester textile ( $130000 \mathrm{~m}^{2}$ ); Fireproof fabric ( $3200 \mathrm{~m}^{2}$ ); PVC sponge ( $56000 \mathrm{~m}^{2}$ ); Linen ( $58000 \mathrm{~m}^{2}$ ); Rebar with $\mathrm{d}=25 \mathrm{~mm}$ ( 166 t ); Iron metal, 1 and 2 mm (84 and 11 t ); Iron pipe St-44 (286t); Chair rails ( 86400 No ); Dye ( 8.5 t );
Rears of seats ( 43200 No); Musaic wire with length of $29 \mathrm{~mm}, \mathrm{~d}=0.9$ and width $7 \mathrm{~mm}(43200 \mathrm{No})$; Polyurethane foams ( 172800 No); Coils of floor seats ( 86400 No); Carpet ( $10500 \mathrm{~m}^{2}$ ); Nylon for packaging ( 43200 No); Tape (43200 No); Stainless materials (8.5t).
Metal sheet of St-37-2, 1 and 1.5 mm (179.5 24.1 t ); PE bags ( 4800 No ); Sacks of 30 kg ( 315 No ).
Brass with grade of 70-30 (15000 kg); Metal bar ( 2000 kg ); Plastic materials (1t); Rubber ( 200 kg ); Circular magnet ( 24000 kg ); Coil, 3 mm ( 240000 No ); Oring ( 144000 No ); Diaphragm ( 24000 Kg ); Iron sheets ( 15000 No); Washer ( 48000 No ); Electronic components ( 24000 No ); Other pieces ( 24 t ); Packing supplies ( 24000 No ); Brochure ( 24000 No).
Steel pipes of St-52-3, d=76.5 and external d=63.5 mm (450 and 65t); Shaft Ck 45-G (100000 No); Steel Ck-Z5 ( 200000 No); Four-hinged alloy steel ( 200000 No); Needle ball bowl ( 800000 No); Seal or rubber NBN ( 800000 No); Needle ballbearings ( 24800 No); Four pieces steel of Ck-Z5 ( 100000 No); Rings ( 800000 No); Circular rubber pieces, thickness of 4 mm (200000 No); Grease (8.2t); Liquid dye (4.1t).
Iron sheets of $1 * 1.1,5^{*} 1,3 * 6 \mathrm{~m}^{2}(300000 \mathrm{No}$ ); Asbestouse $35.7 \%$ and $15.3 \%$ ( 7 and 30 t ); AlO, $25 \%$ ( 8 t ); Barit (16t); Calcite $1.3 \%(6 \mathrm{t})$; Iron oxide $1.3 \%(6 \mathrm{t})$; Powder black carbon ( 6 t ); Graphite powder of $3.1 \%$ (36t); Liquid dye (12t); Folic powder ( 30.300 kg ); Friction powder, $6 \%$ ( 3.03 kg ); Packaging box (30300 No); Carton (3030

No).
Iron sheet, thickness of 1.5 mm (34t); Packaging box ( 2500 No ); Boxes (200000 No).
Cost iron (220t); Steal (60t); $\mathrm{CO}_{2}-141, \mathrm{CO}-191$ ( 202.5 t and 202.5 t ); $\mathrm{Gas}^{2} \mathrm{CO}_{2}$ ( 8100 kg ); Silicate ( 3214 t ). Steel ingot SW (36t); Flexible coil (1200 No); Steel shot SP=2.5 mm (132 kg); Nylon bags of $15 * 15 \mathrm{~cm}^{2}$ ( 1200 No).
PVC cover (28t); Cu wire with d= 3 mm ( 5.3 t ); Metal sheets with thickness of $1 \mathrm{~mm}, \mathrm{Kc}-30(350 \mathrm{~kg})$; Metal rebar with thickness of $9 \mathrm{~mm}, \mathrm{Kc}-15$ (2.7t); PE foam (3t); Mirror with dimensions of 4*10 $\mathrm{cm}^{2}$ ( 30000 No ); Artificial leather (39t); Fiber with thickness of 3 mm ( 15000 No); DOP gum (3t); Shoe adhesive (1.5t); Punch, 100 No per package ( 1500 package); PP connector pieces ( 60000 No ); wooden palette in dimensions of $60 * 125 * 155 \mathrm{~cm}^{3}$ ( 600 No); Cartons with dimensions of $36 * 26 * 37 \mathrm{~cm}^{3}(1500 \mathrm{No})$.
Hub of lock ( 7900 kg ); Brass pipe, $\mathrm{d}=12 \mathrm{~mm}(300 \mathrm{~kg})$; Steel- 37 sheets in 2 mm thickness ( 1380 kg ); Flexible sheet in 1 mm thickness ( 1815 kg ); Tin sheets of 0.2 mm ( 26 kg ); Brass wires, $\mathrm{d}=2.5 \mathrm{~mm}(281 \mathrm{~kg})$; Cu wires, $\mathrm{d}=2 \mathrm{~mm}$ ( 57 kg ); Metal raw key ( 2670 kg ); Coil DIN 2098 ( 600000 No); St- 37 DIN 94 ( 150000 No); Cardboard boxes ( 75000 No); Three layer carton ( 1563 No ); Plastic bags ( 75000 No ).
Metal sheets, C75 and St-42 thicknesses of 0.5 and 2 mm (18 and 53.5t); Asbestos linings ( 200000 No ); Metal washer ( 200000 No); Flexible washer ( 100000 No); Asbestos paper washer ( 100000 No); Fender coil ( 600000 No); Metal busch ( 10000 No ); Metal punch ( 620000 No ); Carton with dimensions of $47 * 17 * 24 \mathrm{~cm}^{3}(10000 \mathrm{No}$ ). Cellulose ( $60000 \mathrm{~m}^{2}$ ); Flat glass, thickness of $2 \mathrm{~mm}\left(120000 \mathrm{~m}^{2}\right.$ ); Packaging paper ( $120000 \mathrm{~m}^{2}$ ); Wood containing dimensions of $5 * 5 \mathrm{~cm}^{2}(13606.8 \mathrm{~m})$; Wooden lining with thickness of $0.4 \mathrm{~cm}\left(4155.14 \mathrm{~m}^{2}\right)$.
St-42 sheets of 2 and 3 mm ( 30.5 and 7.55t); Stainless steel, thickness of 3 mm ( 14300 kg ); Ingot with size of $50 * 10 * 10 \mathrm{~cm}^{3}(11 \mathrm{t})$; Poly amid 6,6 (2700 kg); PP ( 3300 kg ); St-37 rebar, d=8mm ( 3000 kg ); Wire, d=4mm (244 kg ); St-42 wire, d=4mm ( 700 kg ); St-42 rebars, $\mathrm{d}=5,10,12,22 \mathrm{~mm}(7727 \mathrm{~kg})$; Metal cable, $\mathrm{d}=5.4 \mathrm{~mm}(1516 \mathrm{~kg})$; Textile tape with width of $47.5 \mathrm{~mm}(159000 \mathrm{~m})$; PVC cover, thickness of $15 \mathrm{~mm}(12500 \mathrm{~m})$; C- 75 sheets with thickness of 0.4 and width of $8.7 \mathrm{~mm}(175000 \mathrm{~m})$; Various coils ( 150000 No ); Metal plates C-75, thickness of 0.4 $\mathrm{mm}(50000 \mathrm{No})$; T shape pieces St-42, d= 12mm ( 50000 No ); Screws, L= 40 mm SW16, M10 ( 150000 No ); Car bolts ( 500000 No); Bolts and nuts of plugs SW10 ( 50000 No); Various washers, d= 11 mm ( 150000 No); Plastic bags having sizes of $10 * 19,36 * 60 \mathrm{~cm}^{3}(100000 \mathrm{No})$; Cardboard boxes in size $10 * 15 * 8 \mathrm{~cm}^{3}(50 \mathrm{No})$; Cartons in dimensions of $31 * 31 * 25$ and $40 * 5 * 80 \mathrm{~cm}^{3}$ ( 2778 and 1389 No ).

Steel sheets, thickness of 2 and 3 mm (123 and 2.5t); Galvanized sheets, thickness of $0.5 \mathrm{~mm}(2.5 \mathrm{t})$; St- 42 rebar, thickness of $10 \mathrm{~mm}(3 / 4 \mathrm{t})$; Bone fiber, thickness of $1.5 \mathrm{~mm}\left(386 \mathrm{~m}^{2}\right)$; Poly amid 6,6 (2t); Grease ( 900 kg ); Epoxy gum (1t); Coil 15 A, 12 volt ( 100000 No); Engine cap ( 100000 No); Magnet ( 200000 No); Coal for some cases ( 100000 No); Circular bush st-37 (100000 No); Porous and U shape bushes ( 100000 No); Plastic gearshift bush ST-42, d=10 mm (200000 No); Moving axis of ST-37, d= $10 \mathrm{~mm}(100000$ No); SW10 Nuts (100000 No); Bolts SW6 small and big ( 300000 and 200000 No); Bolts of $2.5 \mathrm{~mm}(300000$ No); Bolts and nuts of grade 10 (100000 No); Washer ST-37, thickness 1 and $\mathrm{d}=10 \mathrm{~mm}$ ( 100000 No ).
Polyurethane foam (12.6t); PVC (379 kg); Plastic poly amid $6(211 \mathrm{~kg})$; ABS (1411 kg); PS (156 kg); Steel sheets37, thickness of $1 \mathrm{~mm}(11 \mathrm{~kg})$; Metal pipes, $\mathrm{d}=14 \mathrm{~mm}(25600 \mathrm{~m})$; Metal pipe, internal d=1.5 $\mathrm{cm}(613 \mathrm{~m})$; St-37 coil ( 60000 No); Bolts ( 20000 No); Plastic bags ( 4000 No).
SW16 wires ( 9 kg ); Cu sheet, thickness of $0.5 \mathrm{~mm}(7500 \mathrm{~kg})$; Brass wires, $\mathrm{d}=7 \mathrm{~mm}(890 \mathrm{~kg})$; Brass sheets, thickness of $0.8 \mathrm{~mm}(167 \mathrm{~kg})$; SW6 brass hexagonal wires ( 1166 kg ); Resistant tablets ( 100000 No ); Torsion coil,

L and d $=30$ and 4.8 mm ( 100000 No ); Rubber and plastic washers ( 100000 and 100000 No); Crdboard boxes having dimensions of $20 * 20 * 55 \mathrm{~mm}^{3}\left(100000 \mathrm{No}\right.$ ); Three layers cartons of $100 * 100 * 220 \mathrm{~mm}^{3}(1000 \mathrm{No}$ ). Al ingot LM-24 (3.6t); Thermoset resin (4.4t); Cardboard boxes with dimensions of $15 * 13 * 10 \mathrm{~cm}^{3}$ ( 100000 No); Big cartons in sizes of $330 * 65 * 50 \mathrm{~cm}^{3}(2000 \mathrm{No})$; Nylon bags in size of $20 * 300 \mathrm{~cm}^{2}(100000 \mathrm{No})$; Al wheels of pumps (100000 No); Bush (100000 No); Barb (100000 No); Seal (100000 No); Ballbearing (100000 No); Paper washers ( 100000 No ).
PVC C65 (673.7t); Cu wire (10105.5t); Printing ink ( 825 kg ); PVC Spools ( 32000 No ). Iron pipes having internal and external d=80 and $95 \mathrm{~mm}(33.8 \mathrm{t})$; Iron rebar, $\mathrm{d}=6 \mathrm{~mm}(230 \mathrm{~kg})$; AL caps (20000 No); Two-side metal lever ( 20000 No); Piece of hoof ( 80000 No); Plastic lever pieces ( 20000 No); Coal boxes (20000 No); Scuttle (40000 No); Coal (80000 No); Coal coil (40000 No); Automatic start (20000 No); Bolts and nuts of M4 (120000 No); Warhead plates. Thickness of 2 mm (20000 No); Coil (20000 No); Start gear (20000 No); Tall screw Land d= 145 and 2 mm ( 40000 No); Coil washer ( 100000 No); Ring barbs ( 40000 No); Bush on gear ( 20000 No); Brass bush ( 40000 No); Cushions having Cu wires ( 20000 No); Screw of hoof with d and L=5 and $9 \mathrm{~mm}(80000 \mathrm{No})$; Packaging cartons having dimensions of $220 * 100 * 160 \mathrm{~mm}^{3}(20000 \mathrm{No})$; Plastic plasters of $440 * 240 \mathrm{~mm}^{2}$ (20000 No); NaOH, 50\% (2000 L); Phosphoric acid (2000 L).
Al sheets, thickness of $1 \mathrm{~mm}(1075 \mathrm{~kg})$; Bone fibers, thickness of $2 \mathrm{~mm}\left(179 \mathrm{~m}^{2}\right)$; Greasy cardboard ( 13 kg ); Galvanized sheets, thickness of $1 \mathrm{~mm}(1020 \mathrm{~kg})$; Cu sheet, thickness of $1 \mathrm{~mm}(21 \mathrm{~kg})$; Cu punch ( 400000 No ); Metal plastes of C75, thickness of $8 \mathrm{~mm}(57 \mathrm{~kg})$; Chromium element wire ( 20000 No ); Tin plates, thickness of 0.2 $\mathrm{mm}(33 \mathrm{~kg})$; Boxes having dimensions of $34 * 34 * 34 \mathrm{~mm}^{3}(200000 \mathrm{No})$; Three layers cartons having sizes of 350*275*175 mm ${ }^{3}$ ( 800 No ); AL sheets, thickness of $0.5 \mathrm{~mm}(80 \mathrm{~kg})$.
Galvanized iron with L and $\mathrm{d}=39$ and 10.7 mm ( 103000 No ); Body with external d=45.5 mm ( 104000 No ); Pyramid piece d=21 mm (104000 No); Piece below the body, thickness and d=4.1 and 3/4 mm (104000 No); Caps, thickness of $3 \mathrm{~mm}(104000 \mathrm{No})$; Brass pipe, internal and external d $=21$ and $21.8 \mathrm{~mm}(103000 \mathrm{No})$; The main body of the warhead ( 103000 No ); Galvanized bolts, 5.5 mm ( 204000 No ); Lacquer wire, $\mathrm{d}=3.5$ and 1 mm ( 13125 kg ); Solder ( 33 kg ); Various washers ( 1000000 No ); Copper blade, thickness of 22 mm ( 102000 No ); Small coils, $\mathrm{d}=1$ and $1.5 \mathrm{~mm}(410000 \mathrm{No})$; Plastic bags, $\mathrm{L}=18 \mathrm{~mm}(103000 \mathrm{No})$; Cardboard boxes containing sizes of $7.5 * 7.5 * 17 \mathrm{~cm}^{3}(103000 \mathrm{No})$; Carton in sizes of $17 * 15.5 * 30.5 \mathrm{~cm}^{3}(12875 \mathrm{No})$; Other devices such as tape, punch, bolts and nuts etc ( 103000 No ).
St-37, thickness of 1 mm (173.5t); St-37, thickness of $4 \mathrm{~mm}(5 \mathrm{t})$; St-32, external d=41 mm (244t); Glass wools having rolls of $1 * 6 \mathrm{~m}$, thickness $2.5 \mathrm{~cm}\left(5450 \mathrm{~m}^{2}\right)$; Oily dye (12.5t).
Pipe of 3.8 inch DIN 115 CrV3 ( 1570 kg ); Rebars of DIN 115 CrV3, ECN-200, C35 ( $680 \mathrm{~kg}, 9750$ and 4740 kg ); St-37, thickness of $1 \mathrm{~mm}(2750 \mathrm{~kg})$; Steel Grating Sheet, wire thickness $0.5 \mathrm{~mm}\left(400 \mathrm{~m}^{2}\right)$; AL LM-20 (60800 No); M6 connecting nut ( 40800 No); M6 connecting bolts ( 100000 No); Flexible washer, internal and external d=6 and 10 mm (100000 No); Metal FCPAS-208 (40000 No); Relief valve spring, L= 43 mm (20000 No); Caps of L and $\mathrm{d}=40$ and $2 \mathrm{~mm}(20000 \mathrm{No})$; Victoria washer (20000 No); PE plastic, L=30-40 cm (20000 No); Boxes in sizes of $20 * 20 * 40 \mathrm{~cm}^{3}$ ( 20000 No ).
Seven copper wires with silver plated strings each of them, $0.6 \mathrm{~mm}(1570 \mathrm{~kg})$; PP with $2 \%$ soot ( 2820 kg ); Hinged interface made of lead ( 100000 No); Lead plates ( 100000 No); Poly amid granules, nylon 6 ( 26 kg ); Steel -37 rebars, $\mathrm{d}=1480 \mathrm{~kg}(1480 \mathrm{~kg})$; Asbestous fibers, $\mathrm{d}=0.6 \mathrm{~mm}(550 \mathrm{~kg})$; Polyster resin ( 2200 kg ); Titan powder (1650 kg ); Bolts of SW-8-M4, L=30 mm ( 100000 No ); Two-side bolts $\mathrm{M}_{4}, \mathrm{~L}=18 \mathrm{~mm}(100000 \mathrm{No}$ ); Iron cast washer, thickness of 0.8 mm , internal and external d= 5.5 and $11 \mathrm{~mm}(100000 \mathrm{No})$; Cu washer, thickness of 0.4 mm (100000 No); Hexagon Nuts SW 8-M4 (100000 No); Cu washer, thickness of $0.4 \mathrm{~mm}(100000$ No); Resin hardner ( 100000 No ); Dye ( 200 kg ); LDPE boxes of size around $90 * 50$ and $10 * 5 \mathrm{~cm}^{2}(100000$ and 100000 No); Cardboard boxes with dimensions of $90 * 20 * 30 \mathrm{~cm}^{3}\left(100 \mathrm{No}\right.$ ); Packaging boxes with dimensions of $25 * 4 * 30 \mathrm{~cm}^{3}(100 \mathrm{No})$.

Glass (54430 m²); Ag (95 kg); First grade thinner (23814 ); Dye (4763 kg); Nylon (12852 kg); Small cartons ( 1272600 No ); PE ( 323870 kg ); Lacquer liquid ( 1905 kg ).
St-37 with thicknesses of $0.8,1.5 \mathrm{~mm}$ (297.7t); C75 sheets, thickness of $1.5 \mathrm{~mm}(315 \mathrm{~kg})$; St-37 and St-42 wires, $\mathrm{d}=6$ and 15.6 mm ( 8368 and 3550 kg ); Alkaline materials ( 3240 kg ); Zinc phosphate solution, $\mathrm{pH}=1.8-2.5$ ( 4500 kg ); Dye ( 5632 kg ); Radiator ( 50000 No ); Hose, 1 inch ( 50000 No); Lumber fastener, 1 and 0.25 inch ( 100000 No); AL lever stand ( 100000 No); Flexible wire, d= $23 \mathrm{~mm}(50000 \mathrm{No}$ ); Tap bolt with grade of 4 ( 100000 No );

Punch bolts ( 250000 No); ABS buttons ( 100000 No); Channel cap ( 100000 No); Bolts and nuts of M4, M5 (300000 and 300000 No); Connector of stove levers, T shape, St-42 ( 50000 No); Wire fastener C75, thickness of $0.6 \mathrm{~mm}(200000 \mathrm{No})$; Wire containing cover, $\mathrm{L}=40$ and $70 \mathrm{~cm}(100000 \mathrm{No})$; Congress thorns ( 100000 No );
Engine, 12 V DC ( 50000 No); Tap washer, d= 30 mm ( 50000 No ); Body and stove washers ( 50000 No ); Hatch cover (2000 No); Washers of engine door made of Polyurethane ( 100000 No ); St-42 wires, d=6 mm ( 212 kg ); AL stove taps ( 50000 No ).
Electrical engine of fan, 12 V DC ( 9600 No ); ABS and Poly amid pieces ( 9600 No); Pressed sheets of thicknesses, $0.5,0.6,0.7,1$ and $1.2 \mathrm{~mm}(9600 \mathrm{No})$; Brass pipes of thickness and $\mathrm{d}=1$ and $12 \mathrm{~mm}(9600 \mathrm{No})$; Cu-brass sheets ( 9600 No ); Other pieces ( 9600 No ).
Steel sheets, thickness of 0.8 mm ( 1060 sheets); Strips Fe, thickness of $2 \mathrm{~mm}, \mathrm{w}=7 \mathrm{~mm}$ (2.5t); PP with filler of carbon black ( 2320 kg ); polyester ( 2410 kg ); Black dye ( 2500 kg ); Connection base of AL ( 100000 No ); Rubber blade of SBR and EPDM ( 40000 m ); Flexible thorn ( 100000 No); Small and large pins ( 400000 No); Small punch ( 100000 No); Helix coil ( 100000 No); Thorn guarantor ( 100000 No).
St-37 rebar, $\mathrm{d}=8 \mathrm{~mm}$ (6.1t); Brass rebar, $\mathrm{d}=16 \mathrm{~mm}(4.5 \mathrm{t})$; St-37 sheets, thickness of 1.8 and 1 mm ( 867 and 14.4t); St-37, external d=9.5 mm (1.6t); Casting pieces ( 100000 No ); Air springs and valves DIN-2098T ( 100000 No ); Filter ( 100000 No); Rubber gaskets ( 500000 No); Rubber pipes ( 100000 No); Slotted screws DIN-24 (500000 No); Rubber air diaphragm ( 100000 No ); Plastic diaphragm base DIN-7728T ( 100000 No ); Bolts ( 300000 No ); Filter caps DIN-963 ( 100000 No); Air caps ( 100000 No); Gaskets ( 100000 No); Cast iron hydraulic piston DIN 7210 ( 100000 No); Rubber pan pieces ( 100000 No); Cast iron holder pins DIN 1621 ( 100000 No); Rubber gaskets ( 100000 No); plastic bearings ( 100000 No); Cast iron pin DIN 1621 (100000 No); Rubber diaphragm (100000 No); Piston ( 100000 No); Flexible coil ( 100000 No); Bolts DIN-931 (300000 No); Cast iron connector DIN-17111 ( 100000 No ); Bolts and nuts ( 100000 No ).
ABS (10t); Urea (36t); Bone fiber, thickness 1 of mm (6.5t); Brass strip, thickness of 0.5 mm (3.3t); Cast iron sheet, thickness of $2 \mathrm{~mm}(82.5 \mathrm{t})$.
St-12 sheets of thickness of $1.5 \mathrm{~mm}(60 \mathrm{t})$; St-380 sheets of thickness 7 mm (225t); Pipe, thickness of 1 mm , external d=16mm ( 8000 kg ); St-3730, external d=22 mm (13t); St-380, thickness of $1 \mathrm{~mm}(3580 \mathrm{~kg})$; Bolts and nuts, mesh of $15, \mathrm{~L}=130 \mathrm{~mm}(100000 \mathrm{No})$; Gaskets ( 200000 No ); Bolts of M $21 * 6$ and $8 * 22 \mathrm{~mm}^{2}(600000$ and 400000 No); Dye ( 3400 kg ); Phosphate and alkaline materials ( 800 kg ).

Cylinder body ( 50000 No ); Cast iron rebar, $\mathrm{d}=18 \mathrm{~mm}$ ( 6 t ); St-37 rebar, $\mathrm{d}=12.5 \mathrm{~mm}$ (3t); St-37 metal sheets, 2.5 $\mathrm{mm}(850 \mathrm{~kg})$; LDPE caps ( 50000 No ); Oil chamber made of LDPE ( 50000 No ); External cap ( 50000 No); Control valve, $1.15 \mathrm{~atm}(50000 \mathrm{No})$; Flexible coils ( 50000 No ); Base of coil made of LDPE ( 50000 No ); NBR rubber ( 50000 No ); St-37 gaskets, thickness of 1 mm ( 100000 No); St-37 gasket distance, thickness of 3.5 mm ( 50000
 Cardboard boxes in dimensions of 7*14*16 cm ${ }^{3}\left(50000 \mathrm{No}\right.$ ); Cardboard cartons, sizes of $32.5 * 28.5 * 28.6 \mathrm{~cm}^{3}$ ( 3225 No ).
Iron sheets, thickness of 2 mm ( 200 kg ); Galvanized sheets, thickness of 1,4 and $0.6 \mathrm{~mm}(14.5,4.4$ and 1.8 t$)$; Steel gasket, thickness of $1.25 \mathrm{~mm}(52000 \mathrm{No})$; Cast iron wires, $\mathrm{d}=12 \mathrm{~mm}(52000 \mathrm{No})$; Cast iron wires of d=7 and 9 mm ( 470 and 1287 kg ); Cast iron rebar, d= 22 mm ( 3700 kg ); Main body made from Al alloy ( 52000 No ); Galvanized pipes ( 104000 No); Plastic pieces and pipes ( 52000 and 52000 No); Plastic plates ( 52000 No); Optical frame ( 52000 No); Rubber rings ( 52000 No); Steel wire coils ( 52000 No); Cast iron bolts ( 52000 No); Plastic gaskets ( 52000 No); Sealant gaskets ( 104000 No); Diaphragm coil ( 52000 No); Coil valve ( 104000 No); Rubber diaphragm ( 52000 No ); Cardboard boxes of about $10 * 20 * 10 \mathrm{~cm}^{3}\left(52000 \mathrm{No}\right.$ ); Cartons of around $50 * 40 * 40 \mathrm{~cm}^{3}$ ( 1300 No ).
St-44-3D in sizes of $1.5 * 1000 * 2000 \mathrm{~mm}^{3}(49 \mathrm{t})$; Cast iron wire, CK-60, d= $55 \mathrm{~mm}(3 \mathrm{t})$; Cu alloy containing Silicon $1.5 \%, \mathrm{Mn} 25 \%, \mathrm{Cu} 98.25 \%$ ( 0.9 t ); Plastic bags of about $20 * 30 \mathrm{~cm}^{2}$ ( 80000 No ); Carton in dimensions of $300 * 300 * 600$ and $275 * 275 * 350 \mathrm{~mm}^{3}$ ( 2000 No ).
Steel rebar (1700t); Sacks of around $40 * 10 * 30 \mathrm{~cm}^{3}(54000 \mathrm{No}$ ); Oil (13.5t); Fat removal materials ( 580 kg ); $\mathrm{H}_{2} \mathrm{SO}_{4}, 98 \% 540 \mathrm{~kg}$ ); Zinc phosphate salt ( 5800 kg ); Cyanide alkaline solution ( 2100 kg ); Pure $\mathrm{Zn}(24300 \mathrm{~kg})$; Organic compound ( 6800 L ); Chromate Salt ( 260 kg ); $\mathrm{H}_{2} \mathrm{SO}_{4}(325 \mathrm{~L})$.

Core lamina (137.7t); Steel sheets, thickness of $1 \mathrm{~mm}(27.058 \mathrm{t})$; Lacquer wire (20.15t); PE spool (212000 No); Split cable (3*1.5)(37000 m).
St-42 and St-37 sheets of around 5 and 1.25 mm thickness ( 58.3 t and 69.3 t ); $\mathrm{St}-37$ wires, $\mathrm{d}=4 \mathrm{~mm}(3.2 \mathrm{t})$; Coils, $\mathrm{d}=$ $11 \mathrm{~mm}, 1.5 \mathrm{~kg}$ ( 10000 No ); HDPE buttons ( 100000 No ); PE caps ( 100000 No ); Gaskets, thickness of $0.5-2 \mathrm{~mm}$ ( 500000 No); Steel rivet, d= 6 mm (200000 No); Dye (2.2t); Packaging cartons of about $15 * 15 * 45 \mathrm{~cm}^{3}(10000$ No); LDPE, $15^{*} 45 \mathrm{~cm}^{2}$ ( 100000 No ).
Brass sheets, DIN Cuzn 30, thickness of 1 and 2 mm (9780 and 4330 kg ); Rebar DIN; Cuzn 30, thickness of 16 $\mathrm{mm}(2890 \mathrm{~kg})$; St-37, thickness of $1 \mathrm{~mm}(770 \mathrm{~kg})$; Expandable materials ( 300 kg ); Thermostat coil, d=22 mm, L= 40 mm ( 120000 No); EPDM rubber ( 120000 No); Piston capsule, L= $28 \mathrm{~mm}, \mathrm{~d}=3 \mathrm{~mm}$ ( 120000 No); Balancing valve, $\mathrm{L}=5 \mathrm{~mm}, \mathrm{~d}=3 \mathrm{~mm}(120000 \mathrm{No})$; Gaskets of balancing valve ( 120000 No ); Adjusting screw, $\mathrm{d}=5 \mathrm{~mm}$ ( 120000 No); Packaging boxes, sizes of $6 * 6 * 6 \mathrm{~cm}^{3}$ ( 120000 No); Packaging carton in dimensions of $36 * 24 * 24$ $\mathrm{cm}^{3}$ ( 1255 No ).
SBR (229t); Natural rubber (229t); ZnO (18.3t); Stearic acid (9.2t); Sulfur powder (10.3t); MBT accelator (5.7t); N 330 soot (137.3t); Anti oxidant (4.5t); Natural rubber (50t); Polyester yarn (58.7t); Cotton fiber (118.7t); Ink (1t); Paper with sizes of $5 * 12 \mathrm{~cm}^{2}$ ( 3 million tons); Three layers carton ( 17000 No ).
Waxy sheets of about $2000 * 1000 * 0.8 \mathrm{~mm}^{3}$ ( 407 t ); Light bulb, 770 g ( 275000 No ); AL wire, $\mathrm{d}=5 \mathrm{~mm}(300 \mathrm{~kg})$; Epoxy base resin ( 840 kg ); $\mathrm{NaOH}(400 \mathrm{~kg}) ; \mathrm{H}_{2} \mathrm{SO}_{4}, 5 \%(110 \mathrm{~kg})$; Silicon gum (12.5t); Electrical fat removal, 120 $\mathrm{g} / \mathrm{L}(270 \mathrm{~kg})$; Bolts and nuts ( 1250 No ); Packaging materials ( 250000 No).
ABC granules (16t); PVC granules (9.5t); Pigment (300 kg); Red and Orange Polymethyl Methacrylate Pigments ( 600 kg ); Polymethyl Methacrylate ( 31.5 t ); St-37 sheets, thickness of $0.8 \mathrm{~mm}(9 \mathrm{t})$; Brass sheets, thickness of 0.5 $\mathrm{mm}(2 \mathrm{t})$; Silver dye with Al mesh ( 315 kg ); Bubbly films of around $155 * 400 \mathrm{~mm}^{2}$ ( 100000 No ); Three layers boxes of about $155 * 40 * 95 \mathrm{~cm}^{3}\left(100000 \mathrm{No}\right.$ ); Cartons with sizes of $390 * 40 * 320 \mathrm{~cm}^{3}$ ( 100000 No ).
St-13, thickness of 0.25 and $1 \mathrm{~mm}(1296$ and 800 kg ); Cellophane, thickness of 0.02 mm as roll ( 245 kg );
Insulation, thickness of $2 \mathrm{~mm}(534 \mathrm{~kg})$; AL sheets, thickness of $0.1 \mathrm{~mm}(1380 \mathrm{~kg})$; Circular connection fastener
( 200000 No ); Wire, grade of 1.5 ( 1600 kg ); Cardboard insulator, $\mathrm{d}=15 \mathrm{~mm}(3674 \mathrm{~m})$; Cardboard boxes, in dimensions of $2 * 2 * 4 \mathrm{~cm}^{3}$ ( 200000 No ); Large cardboard boxes of about $12 * 12 * 18 \mathrm{~cm}^{3}$ ( 2000 No ).
St-37 sheets of thickness 0.8 and 1.2 mm (840 and 135t); ABS Granules (154t); PE or ABS foam (124 m ${ }^{3}$ ); Dye (25t); Lock (124000 No); Jack (124t); Bolts (240t); Linen (123t); Cartons (123t).
St-37, thickness of $1.5 \mathrm{~mm}(5300 \mathrm{~kg})$; St-37, thickness of $1 \mathrm{~mm}(3524 \mathrm{~kg})$; Steel pipes of internal and external d= .5 and $8 \mathrm{~mm}(307 \mathrm{~kg})$; Pipes with internal and external d=4.5 and $6.5 \mathrm{~mm}(2858 \mathrm{~kg})$; St-13, thickness of 0.8 mm $(3612 \mathrm{~kg})$; Brass sheets of thickness around $0.8 \mathrm{~mm}(404 \mathrm{~kg})$; Brass sheets of thickness, $0.5 \mathrm{~mm}(176 \mathrm{~kg})$; Brass sheets, thickness of $0.25 \mathrm{~mm}(91 \mathrm{~kg})$; St-37, d=2 mm ( 460 kg ); PP (1847 kg); Bakalite plastic ( 409 kg ); NBR plastic ( 358 kg ); SW15 bolts ( 100000 No); Punch, height of 4 mm and d=2.5 mm (200000 No); Pins (100000 No); Floating arm axis (100000 No); Circular coil (100000 No); Paper gaskets (100000 No); Chromium wires (100 kg); Poly amid networks ( 50 kg ).
Poly amid granules ( 1350 kg ); Brass sheets, mesh of 60 , thickness of 1 and $0.5 \mathrm{~mm}(1900$ and 480 kg$)$; Tin sheets with white cover, thickness of $1 \mathrm{~mm}(72 \mathrm{~kg})$; Brass wire, $\mathrm{d}=3 \mathrm{~mm}(54 \mathrm{~kg})$; AL wire, $\mathrm{d}=4$ and $3 \mathrm{~mm}(40$ and 40 $\mathrm{kg})$; Steel rebar, thickness of $1.2 \mathrm{~mm}(105 \mathrm{~kg})$; Brass sheets, thickness of 0.2 and $0.5 \mathrm{~mm}(25$ and 96 kg$)$; St-50, thickness of $0.4 \mathrm{~mm}(45 \mathrm{~kg})$; Tin ( 500 kg ); Brass wire, d= $4 \mathrm{~mm}(34 \mathrm{~kg})$; Connection pin ( 200000 No ); PVC $(100000 \mathrm{No})$; Lacquer wire, $0.1 \mathrm{~mm}(1000 \mathrm{~kg})$; Lacquer ( 204 kg ); Boxes with sizes of $55 * 55 * 60 \mathrm{~cm}^{3}$ ( 100000 No); Carton with sizes of $55 * 300 * 275 \mathrm{~cm}^{3}\left(667000 \mathrm{No}\right.$ ); Nylon, $55 * 60 \mathrm{~mm}^{2}(100000 \mathrm{No}$ ).
St-42, d=15 mm (41.6t); Poly amid 6,6 (2250 kg); Connection pin, d=6 and L= 40 mm (100000 No); Spherical ball, d=4 mm (100000 No); Push coils, d=4 mm (100000 No); LDPE $40 * 10 \mathrm{~cm}^{2}(100000 \mathrm{No})$; Three layer cartons of around $60 * 40 * 40 \mathrm{~cm}^{3}(1000 \mathrm{No})$.
St-37 pipes, internal and external d= 4 and $5 \mathrm{~mm}(760 \mathrm{~kg})$; St-37 Galvanized sheets, thickness of 1.5 mm (1460 $\mathrm{kg})$; Cu sheets of thickness $0.5 \mathrm{~mm}(677 \mathrm{~kg})$; Steel sheets, thickness of $0.4 \mathrm{~mm}(650 \mathrm{~kg})$; Brass rebar, $\mathrm{d}=6 \mathrm{~mm}$ $(1745 \mathrm{~kg})$; Brass rebar, $\mathrm{d}=6 \mathrm{~mm}(320 \mathrm{~kg})$; ABS plastic ( 890 kg ); Plastic poly amid $6(2 \mathrm{t})$; Wires of grade 1.5 and 1 ( 480000 and 272000 m ); Circular coils, $\mathrm{d}=8 \mathrm{~mm}, \mathrm{~L}=30 \mathrm{~mm}$ ( 100000 No ); Circular coil, $\mathrm{d}=6 \mathrm{~mm}, \mathrm{~L}=15 \mathrm{~mm}$ ( 10000 No); Terminal made from poly amid 6,6 and 6,3 (100000 and 100000); Circular brass platinum (200000 No); Connection base ( 200000 No ); Steel connection, d=1 mm (100000 No); Base deployment, $50 \mathrm{~g}(100000 \mathrm{No})$; Punch, L=10, d=2.5 mm (700000 No); Brass pin, d=20, L=17 mm (100000 No); Bolts, d= 3, L=12 mm (200000 No); Wirehead ( 1700000 No); PVC covers of lever, internal d=5 and L= 85 mm ( 100000 No ); PVC covers of internal d=14.5 mm, L= $550 \mathrm{~mm}(100000 \mathrm{No})$; PVC covers of pipes, internal d=3 and L= $14 \mathrm{~mm}(100000 \mathrm{No})$; Brass wireheads ( 100000 No); Nylon bags ( 100000 No); Cardboard boxes of about $70 * 70 * 255 \mathrm{~mm}^{3}$; Covers of wireheads ( 20000 No ); Three layer cartons of about $36 * 36 * 52 \mathrm{~cm}^{3}$ ( 2000 No ).

St-42 rebar, thickness of 18 and 14 mm (11 and 18.5t); St-37, thickness of 2.5 mm (11t); Galvanized sheets of thicknesses about $1.5,2$ and $0.8 \mathrm{~mm}(7.1,7.7$ and 0.3 t$)$; Caps of delco ( 100000 No ); Power hammer ( 100000 No );

Pelatinum ( 100000 No); Delco capacitor ( 100000 No); Vacuum apparatus ( 100000 No); Delco frame (100000
No); Counterweight and its holder (200000 and 200000 No); Coils ( 200000 No); Delco bars joiner (100000 No); Steel pin (100000 No); Cu gasket (100000 No); Plastic gasket (100000 No); Rubber oring (100000 No); Delco cap fastener ( 200000 No); Pin fastener ( 200000 No); Various bolts ( 500000 No); Bushes ( 300000 No ); Orifice fastener ( 100000 No); St-42 bases of coils ( 400000 No); Platinum base ( 100000 No); Packaging covers ( 100000 No ); Cartons for packaging purposes ( 10000 No).
Brass powder (46.92t); Graphite powder (1.53t); Lead powder (2.55t); Stearic acid (0.51t); Propane (27.4t); $\mathrm{N}_{2}$ (4.4t); Packaging boxes with dimensions of $5 * 7.5 * 7.5 \mathrm{~cm}^{3}$ (19230 No); Packaging cartons of about $30 * 30 * 25 \mathrm{~cm}^{2}$ (2400 No).
Cast iron ingot (347t); Casting sand (330t); Coal powder (11.5t); Bentonite, mesh below 200 (22.5t); PE bags of $25 * 25 \mathrm{~cm}^{2}\left(100000 \mathrm{No}\right.$ ); Cardboard boxes, in sizes of $250 * 250 * 30 \mathrm{~mm}^{3}$ (100000); Cartons in dimensions of $27 * 27 * 32 \mathrm{~cm}^{3}$ ( 10000 No ).
St-50 and CK-50 sheets of thickness 2.5 and 2 mm (110.3 and 30 t ); St-42 wires of d= 18 and 4 mm ( 18.5 and 4.8t);
St-50 sheets of thickness about 1.5 and $1 \mathrm{~mm}(2.5$ and 1 t$)$; Clutch disc as casting, weight of 2.66 kg and external $\mathrm{d}=218 \mathrm{~mm}(50000 \mathrm{No})$; Steel pieces containing weight of 190 g and internal $\mathrm{d}=35 \mathrm{~mm}$ ( 50000 No ); Woody boxes in dimensions of $275 * 280 * 290 \mathrm{~mm}^{3}(12500 \mathrm{No}$ ); Punches of 6 mm ( 300000 No ).
Steel sheets, thickness of 1.5 and $2 \mathrm{~mm}(174$ and 750 t ); Galvanized wire, thickness of 2 and $3 \mathrm{~mm}(30.2$ and 35 t$)$; Fat removal materials ( 4850 kg ); $\mathrm{H}_{2} \mathrm{SO}_{4}\left(1600 \mathrm{~kg}\right.$ ); Sodium cyanide ( 165 kg ); Cyanide copper ( 300 kg ); $\mathrm{CuSO}_{4}$
( 1450 kg ); Plating materials ( 5020 kg ); Cu plates ( 1650 kg ); Ni sheets ( 2300 kg ); Polishing materials ( 1250 kg ); Hub ( 200000 No); Special bolts for motorcycle and bike winding ( 3600 and 4000 No ); Cartons in dimensions of around $65 * 65 * 10$ and $49 * 49 * 18 \mathrm{~cm}^{3}$ ( 50000 and 50000 No ).
Steel DIN 1.7 220, thickness of 3.75 and 2.25 mm (1134 and 185.5t); Electrostatic dye (13045 kg); Phosphate materials (4t); Sodium triphosphate (1t).
Natural rubber with tensile strength of 220 PSI (38t); Styrene butadine N (5.76t); Zno (1.43t); Sulfur (1.254t); Baking accelerators (0.46t); Baking activator (1.678t); Soot N330 (2.88t); Aromatic oil (0.67t); Anti oxidation ( 0.44 t ); Anti $\mathrm{O}_{3}(0.44 \mathrm{t})$; St-37 bars, d=5, 4 and $3 \mathrm{~mm}(0.75,6.62$ and 9.77 t$)$; St-37 in dimensions of $2 * 4 \mathrm{~mm}^{2}$ (7.33t); St-37 straps of around $1 * 1 \mathrm{~mm}^{2}(6.74 \mathrm{t})$; Hose, $\mathrm{d}=8 \mathrm{~mm}(3.27 \mathrm{t})$; Iranian viscozer yarn (2.11t); Plastic bags, $28 * 45 \mathrm{~cm}^{2}(40 \mathrm{t})$; Metal boxes of around $39 * 34 * 19 \mathrm{~cm}^{3}(20 \mathrm{t})$.
Plastics, PP $80 \%$ and EPDM $20 \%$ (211t); St-42, thickness of 1 mm and $12 * 10 \mathrm{~cm}^{2}$ ( 40000 No ); Front and rear bumper shaft, W=12 mm, L= $160 \mathrm{~cm}(40000 \mathrm{No})$; St-42 Snapper, thickness of 1 mm ( 80000 No ); Steel wire, d=5 mm and $\mathrm{L}=21 \mathrm{~cm}(40000 \mathrm{No})$; Plastic bags of around $140 * 35 \mathrm{~cm}^{2}$ ( 40000 No ); Cardboard cartons in dimensions of $140 * 35 \mathrm{~cm}^{2}$ and $\mathrm{h}=85$ and 45 cm ( 40000 No).
Dry lead of $45 \mathrm{~g}(11250 \mathrm{~kg})$; St- 37 sheets of 1.5 and $0.6 \mathrm{~mm}(600$ and 210 kg$)$; AL sheets of $1 \mathrm{~mm}(1 \mathrm{t})$; Galvanized sheets of $0.8 \mathrm{~mm}(4000 \mathrm{~kg})$; Brass wires of $40 \mathrm{~mm}(500 \mathrm{~kg})$; Silver steel, $1.5 \mathrm{~mm}(167 \mathrm{~kg})$; Copper sheet, bronze phosphor, $0.1 \mathrm{~mm}(42 \mathrm{~kg})$; Brass rebar, 5 and $6 \mathrm{~mm}(200 \mathrm{~kg}$ and 250000 No ); Axis of the actuator made of silver steel (200000 No); Magnet, thickness of $0.2 \mathrm{~mm}(200000 \mathrm{No})$; Al punch (200000 No); Odometer ( 200000 No); Plastic bags in dimensions of $8 * 10 \mathrm{~cm}^{2}$ ( 200000 No ); Cardboard boxes of $7 * 8 * 6 \mathrm{~cm}^{2}$ (200000 No);

Three layers cartons of $42 * 44 * 32 \mathrm{~cm}^{3}(1334 \mathrm{No})$; AL plates of odometer ( 200000 No).
Steel wires, $\mathrm{d}=22,16,30,28$ and $40 \mathrm{~mm}(11.2,25,23.4,102$ and 65 t$)$ respectively; Steel sheets, thickness of 2 and 3 mm (3.2 and 2.9t); Polyurethane gaskets of internal and external d=44 mm ( 300000 No ); Polyurethane gaskets of internal and external d=14 and $17 \mathrm{~mm}(300000 \mathrm{No})$; Steel sheets of thickness about $1 \mathrm{~mm}(250 \mathrm{~kg})$; Plastic thermoplastic dampers, 4.5 g ( 300000 No ); Upper and lower chassis interface made of nylon 11 and sulfur molibdone ( 100000 No); Bolts and nuts of sibak ( 50000 No); Thorn BS19701070A78 (50000 No); Upper and lower sibaks interface made of nylon 11 and sulfur molibdone ( 600000 No); Steel bolts ( 350000 No); Packaging cartons of about $110 * 70 * 66 \mathrm{~mm}^{3}(350000 \mathrm{No})$; Woody boxes in dimensions of $450 * 90 * 175 \mathrm{~mm}^{3}$ ( 7292 No ). Relay 12 V ( 40000 No); Transistor B236 (40000 No); Alarm (40000 No); Micro switch (160000 No); Switch on and off keys ( 40000 No ); PE boxes ( 40000 No ); Fiber ( $295 \mathrm{~m}^{2}$ ); Split wires of grade 1.5 ( 615 m ); Other electronic pieces ( 40000 No ); Packaging boxes of around $2 * 10 * 5 \mathrm{~cm}^{3}$ ( 40000 No ); Oily and thinner dyes ( 445 and 88 kg ); Acid perchlorophen ( 600 kg ); Reprinted silk ( 100 No ); Thinner ( 200 kg ); PE doors of boxes ( 40000 No ); Tin ( 680 kg ).
$\mathrm{d}=$ diameter, $\mathrm{St}=$ Steel, $\mathrm{PVC}=$ Polyvinylchloride, $\mathrm{ABS}=$ Acrylonitrile butadiene Styrene, $\mathrm{PS}=$ Polystyrene, LDPE= Low density polyethylene, $\mathrm{PE}=$ Polyethylene,
$\mathrm{PP}=$ Polypropylene, $\mathrm{HDPE}=$ High density polyethylene, $\mathrm{W}=$ width, $\mathrm{L}=$ Length.
